# Grape Leaf Disease Classification using Neural Networks

# Healthy

*Grapes are the most widely produced commercial fruit crop in the world. They are often eaten fresh but are also commonly used to produce wine.*

- ❖ The Common or European grapevine (*Vitis vinifera*) is a long stemmed, woody vine (liana) which produces high value berries, or grapes.
- ❖ The vines can reach lengths in excess of 30 m and can live for many years with proper management.
- ❖ The leaves of the grape vine are alternately arranged on the stem, typically reaching sizes of 5–20 cm (2.0–7.9 in).
- ❖ Flowers are produced in clusters and fruit. The fruit is a berry known as a grape and grows in clusters from the vine.

# Black Rot

**Effects:** It can cause complete crop loss in warm and rainy climates.

**Feature:** Black spheres inside the tan field. Various factors can cause tan lesions on grape leaves, only black rot lesions will feature black sphere inside the tan field.

Black rot (*Guignardia bidwellii* (*Ellis*)) is a potentially devastating fungal disease that can infect the leaves, shoots, berries and cluster stems of grapes. It is originated in eastern North America but is now in portions of Europe, South America, and Asia.

## Black Measles

**Effects:** It can cause complete crop loss.

**Feature:** Interveinal striping that looks like tiger stripes. White cultivars show chlorotic and necrotic strips. Red cultivars show red areas and necrotic strips.

One of the common fungal diseases is Esca (Black Measles) which is found in the Grape Plants and can be easily identified as brown streaking lesions on any part of the leaf. The affected leaves can dry off completely and fall off from the plant prematurely which eventually results in death of the plant.

## Leaf Blight

**Features:** On leaf surface we will see lesions which are irregularly shaped (2 to 25 mm in diameter). Initially lesions are dull red to brown in color turn black later. If disease is severe this lesions may coalesce. On berries we can see symptom similar to black rot but the entire clusters will collapse.

Leaf blight (*Isariopsis Leaf Spot*) is commonly visible in tropical and subtropical grapes. The disease appear late in the season. Cynthiana and Cabernet Sauvignon are susceptible to this pathogen. Fungicides sprayed for other diseases in the season may help to reduce this disease.

# Zernike Moments

*Zernike moments were originally introduced in the 1930s by physicist and Noble prize winner **Fritz Zernike** to describe optical aberrations.*

# Orthogonal Functions

$$\int_a^b y_m(x) y_n(x) dx = 0; \quad m \neq n$$

# Zernike Polynomial

A Set of orthogonal polynomial defined on the disk

$$V_{n,m}(\rho, \theta) = R_{n,m}(\rho) e^{jm\theta}$$

$$R_{n,m}(\rho) = \begin{cases} \sum_{k=0}^{\frac{n-|m|}{2}} \frac{(-1)^k (n-k)!}{k! \left[ \left( \frac{n+|m|}{2} \right) - k \right]! \left[ \left( \frac{n-|m|}{2} \right) - k \right]!} \rho^{n-2k}, & \text{for } n-m \text{ even} \\ 0, & \text{for } n-m \text{ odd} \end{cases}$$

# Zernike Moments

$$Z_{n,m} = \frac{n+1}{\pi} \iint_{x^2 + y^2 \leq 1} f(x, y) [V_{n,m}(x, y)]^* dx dy$$

$$\text{Where } x^2 + y^2 \leq 1$$

*For the digital image, let us denote the intensity of the image pixel as  $f(x,y)$ , Hence the Zenike moment is defined as*

$$Z_{n,m} = \frac{n+1}{\pi} \sum_x \sum_y f(x, y) [V_{n,m}(x, y)]^*$$

*Each image features can be represented with a sequence of Zernike moments*

$$\left\{ Z_{1,1}, Z_{2,0}, Z_{2,2}, \dots, Z_{n_{\max}, m} \right\}$$

*Each moment relates a different piece of information pertaining to the image.*

| Order | Moments  | # of Moments |
|-------|--|--------------|
| 1     | $Z_{1,1}$  | 1            |
| 2     | $Z_{2,0} \ Z_{2,2}$  | 2            |

# Convolutional Neural Network (CNN)

# Historical View

## LeNet-5 (1989–1998)

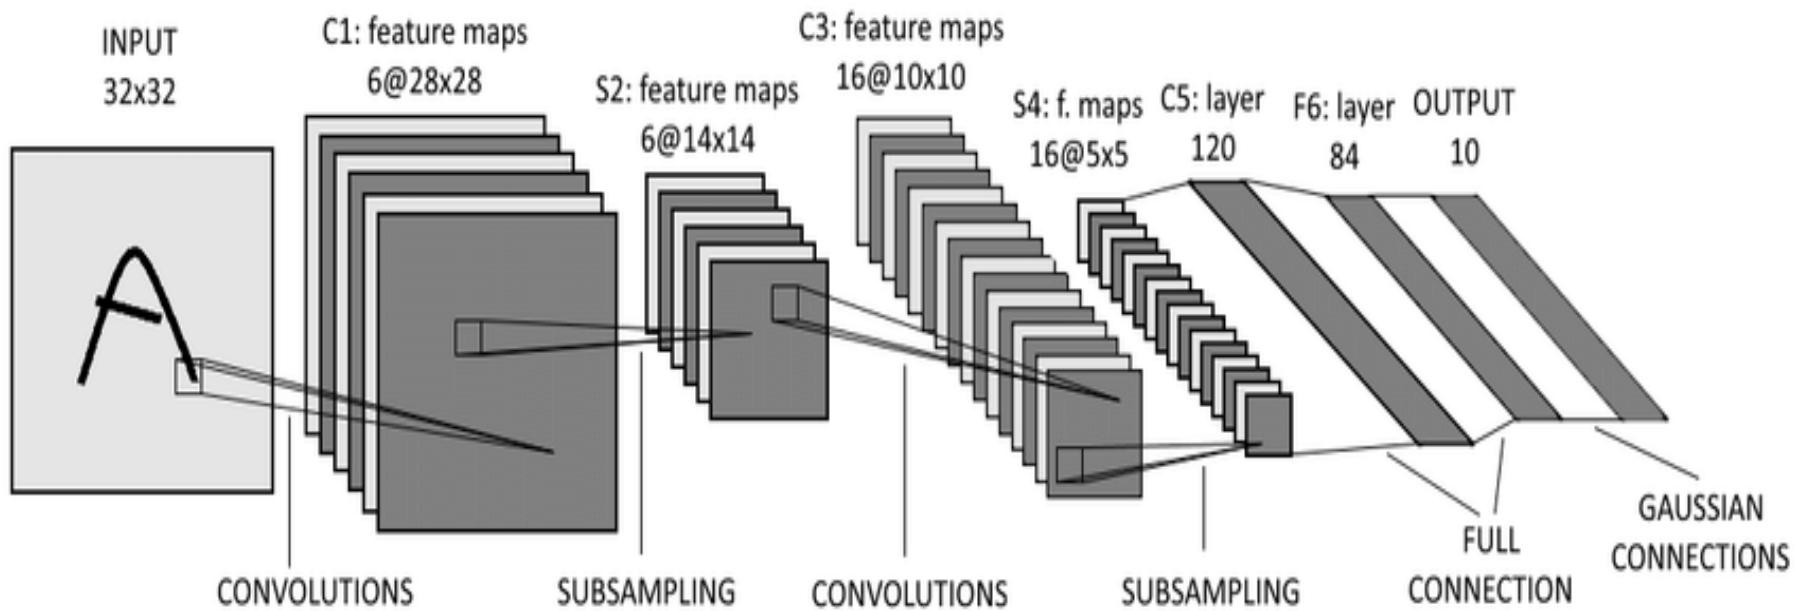

The first successful applications of convolutional networks were developed by Yann LeCun. In 1989, LeCun's team published the first study to successfully train CNNs via backpropagation.

At the time LeNet achieved outstanding results matching the performance of support vector machines, then a dominant approach in supervised learning, achieving an error rate of less than 1% per digit.

LeNet was eventually adapted to recognize digits for processing deposits in ATM machines. To this day, some ATMs still run the code that Yann LeCun and his colleague Leon Bottou wrote in the 1990s!

<http://yann.lecun.com/exdb/publis/pdf/lecun-01a.pdf>

# LeNet Architecture

The credit for newer architectures of CNNs goes to [ImageNet](#) (a dataset) classification challenge named ‘ImageNet large scale visual recognition challenge (ILSVRC)’.

<https://image-net.org/index.php>

It was started in 2010 which led to a significant effort across researchers to benchmark their machine learning and computer vision models, in particular for image classification, on a common dataset.

In 2010, the winning error rate was 28.2%. In 2011 researchers improved the score from 28.2% to 25.8% error rate.

# AlexNet (2012)

Finally in 2012, Alex Krizhevsky and Geoffrey Hinton came up with a CNN architecture popular to this day as AlexNet, which reduced the error from 25.8% to 16.4% which was a significant improvement at that time.

# Receiver Operating Characteristic (ROC) Curve

An **ROC curve** is a graph showing the performance of a classification model at all classification thresholds.

This curve plots two parameters:

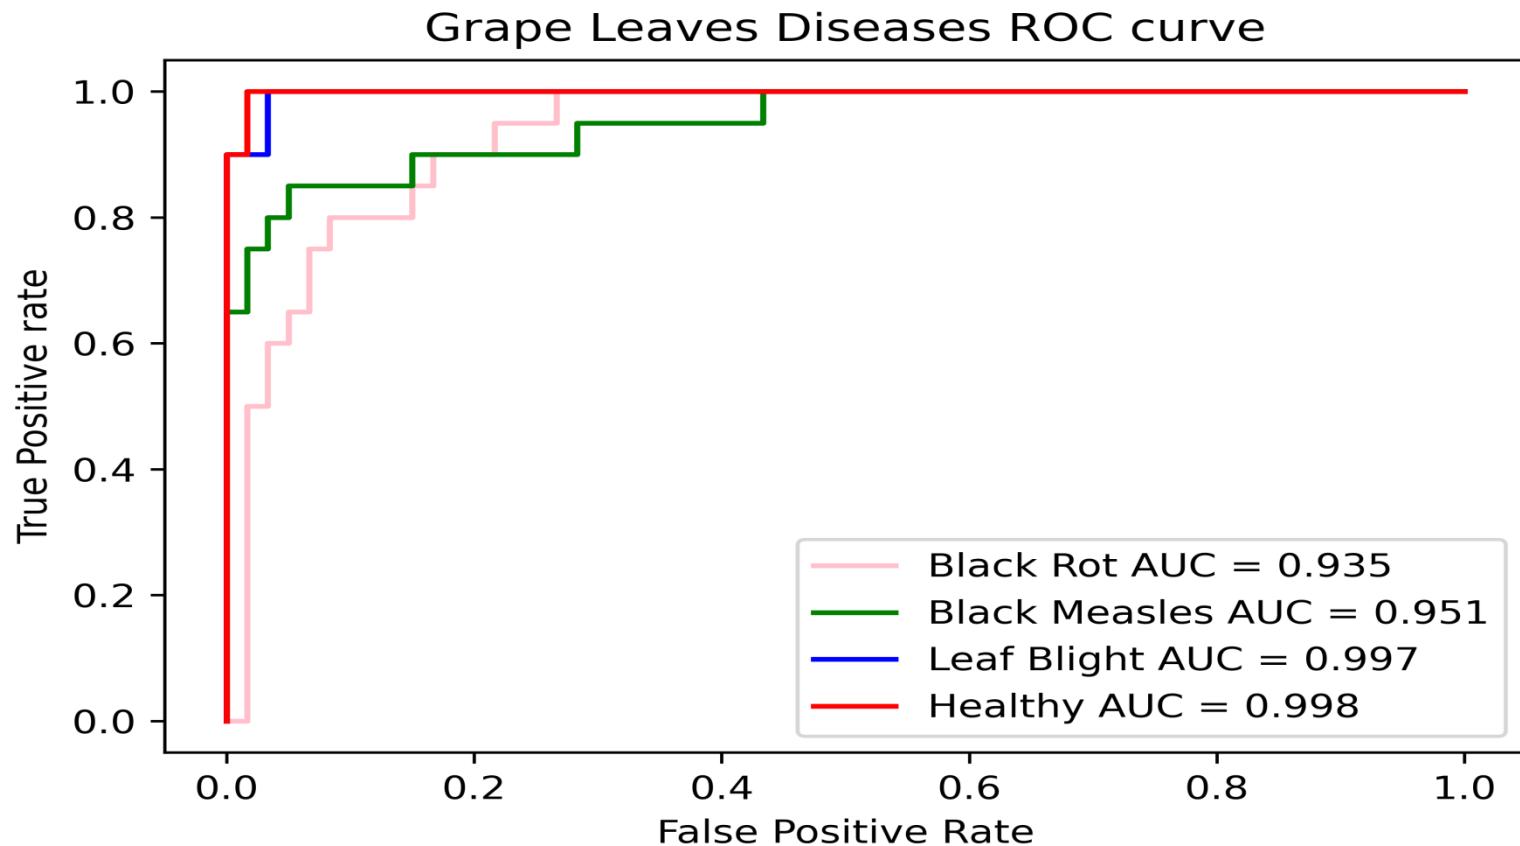

- True Positive Rate
- False Positive Rate

**True Positive Rate (TPR)** is a synonym for recall and is therefore defined as follows:

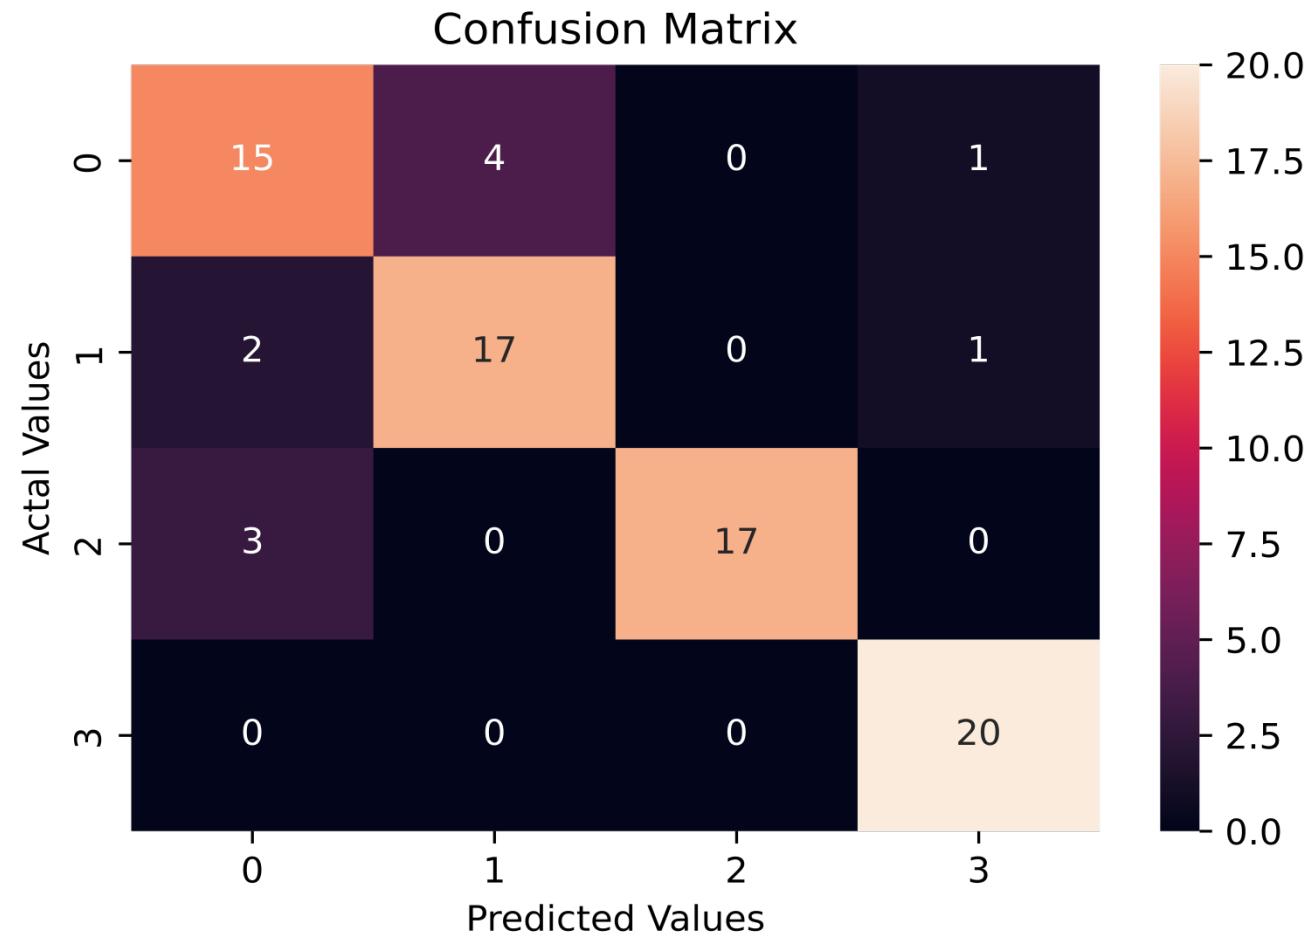

$$TPR = \frac{TP}{TP + FN}$$

**False Positive Rate (FPR)** is defined as follows:

$$FPR = \frac{FP}{FP + TN}$$

# Confusion Matrix

## Supported Library

YOLOv5

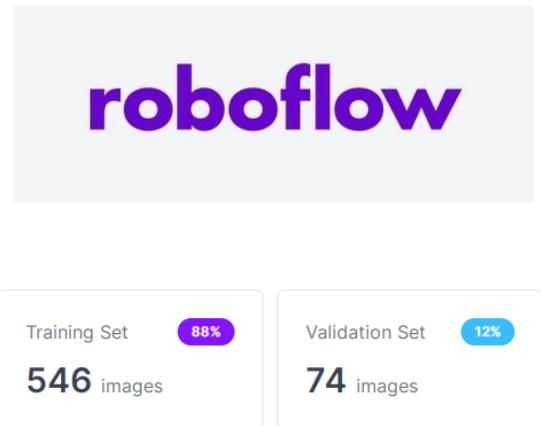

Family of Object Detection architectures and models pretrained on the COCO dataset.

First real-time multi-person system to jointly Detect Human Body, hand, facial, and foot keypoints (in total 135 keypoints) on single image.

\* Pre-trained model by OpenPose is used to detect human body.

# Shuttlecock Detection Process

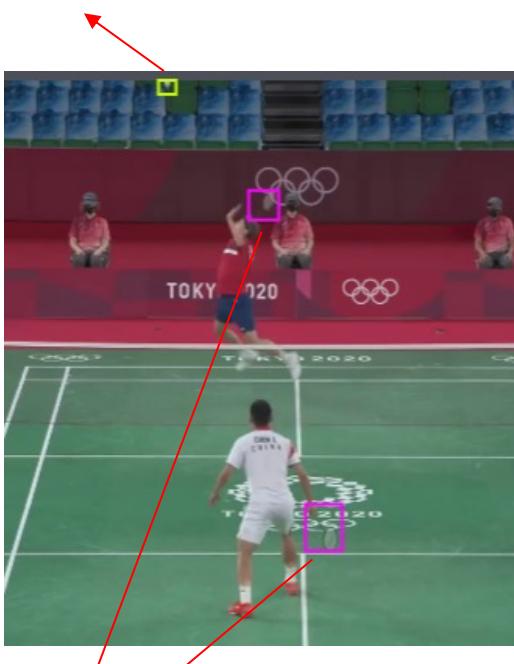

1. Roboflow is used for Image Annotation and Labelling.
2. Total Annotate Images for Training and Validation
